The software has been released under the AutoCAD name since 1983, and has been in continuous production since that time. At the time of release, it was the most sophisticated CAD program available for the desktop. Development of AutoCAD began in the early 1970s at the newly created industry research and development firm Autodesk, Inc., then named Auto-Dynamics, Inc. In its earliest form, AutoCAD was developed as a tool for drafting architectural 3-D models in collaboration with engineering, research, and architecture firms; the first version of AutoCAD to be released in 1982 was focused primarily on architectural drafting. The name "AutoCAD" was chosen because a software developer was assigned to work on it during the weekend hours he typically spent drawing with a drafting tool. As the acronym "LEAD" suggested, "lead" is a noun in American English meaning the rod or handle of a pencil; and at Autodesk, the software was first named AutoCAD/LEAD. Although this name was intended to identify a software product rather than a company name, the company eventually adopted the name of Autodesk, Inc., to avoid confusion with the unrelated, old name of the company's parent company, Autodesk, Inc. The first release of AutoCAD (version 1.0) was made available in December 1982 and included version 1.5.3 (see Comparison chart, "Early releases of AutoCAD"). This version had been named AutoCAD/LEAD, although AutoCAD is still the official product name. AutoCAD was marketed by a newly formed subsidiary, AutoCAD Development Company, Inc., for its first 15 years. AutoCAD, as a desktop app, ran on a personal computer with an internal graphics controller. This version of AutoCAD worked only on compatible microcomputers with internal graphics controllers. When personal computers without graphics controllers were introduced, the software was converted to run on other platforms. In the early 1990s, the Windows operating system became available for personal computers with graphics controllers and the AutoC

I'm asking if someone can define these terms and explain why they are important. "Insider", "outsider", "risk" "commodity" A: An "insider" is a bank employee (a merchant banker, or a credit-rating agency). An "outsider" is a customer of the bank. "Risk" refers to the impact that a single misfortunate event might have on the bank's profitability and/or solvency, in terms of both the bank's liabilities and the banks assets. For example, an insider might know that a specific customer is engaged in shady practices, but in most cases this is only a consideration after a problem arises. "Commodity" refers to products and services that are commonly traded in an open market. For example, the "risk" that a bank has when it lends money to a company is based on the company's ability to repay the money. "Commodity" is a direct synonym for "thing". "Commod
