} Development of a specific and sensitive high-performance liquid
chromatography-tandem mass spectrometry method for determination of
total spirotetramat in apples. A rapid and sensitive high-performance liquid
chromatography-tandem mass spectrometry (HPLC-MS/MS) method has
been developed and validated for the determination of spirotetramat in
apple juice and pure spirotetramat standard. The treatment method was
developed by using a rapid and efficient extraction with an octadecyl
bonded silica solid-phase extraction cartridge (SPE C18) followed by
separation on a C18 column and determination by an electrospray ionization
(ESI)-MS/MS system. The sample clean-up procedure showed high
recoveries in the range of 91.1-106.3%, and the limits of detection (LODs)
were 0.03-0.05 µg/kg. The linearity was determined to be in the range of
0.05-5 µg/kg ($r(2) > 0.9997$). The average spiked recoveries were in the
range of 80.0-107.7% with relative standard deviations (RSDs)
