Photoshop is the Windows-only version of Photoshop Elements. I use Photoshop and Photoshop Elements interchangeably as both terms refer to the same program. I use Photoshop to describe the older version of the program and Elements to describe the newer version. Installing Photoshop You can download Photoshop from the Adobe website (www.adobe.com) to save a little disk space or to acquire an upgrade to a more recent version. The two Photoshop programs differ only in their price and in the amount of memory the program uses for your work. In other words, the program uses the same features — just looks different and operates differently. You can download a single Photoshop program for use on only your computer, or a program for use on several computers. Because I'm writing this book for Windows users, I'm using the single-computer version. You can download either the Windows or Mac version of Photoshop. The program you download is for use only on one computer. If you want to use your program on two computers, then you must purchase a separate version of Photoshop for each computer. To run Photoshop, you need a computer with an Intel or AMD processor. You also need a monitor with a minimum of 640 x 480 pixels and a VGA port. Downloading and opening the program Open the Photoshop installer program on your computer, and then follow these steps to install Photoshop on your computer: 1. Click to activate the program. If the program is already active on your computer, skip to Step 2. 2. Follow the prompts to choose the language, country, and locale that you want to use. 3. Click the Install button to begin the installation program. 4. When the installation begins, click Next. 5. As part of the installation, you need to decide whether to select the Custom or Upgrade option. If you want to perform a custom installation — where you specify how much memory and other resources the program will use — then select the Custom option. This option requires you to specify the memory and resources you want the program to use, such as • Swap space — which can be used temporarily for data • Your hard drive space — which allows you to specify how much space you want to use • Download updates — which means the computer can get Adobe updates for Photoshop If you want to use Photoshop as an upgrade, then select the Upgrade option. This option enables you to use the

Q: In the case that f is entire, f is Borel measurable $\Leftrightarrow$ f is continuous. Let f be an entire function. If f is Borel measurable, then f is continuous. Proof: Let $A\subset \mathbb{C}$ be Borel measurable. Assume that f is not continuous at z. Then there exists $r > 0$ such that for all $\epsilon > 0$, there exists $x\in \mathbb{C}$ and $y\in \mathbb{C}$ for which $|x - z| = |y - z| = r$, and $|f(x) - f(z)| > \epsilon$ and $|f(y) - f(z)| > \epsilon$. Choose ϵ small enough that $|x - y| \epsilon$. So f is not Borel measurable. I can't explain my question clearly, what is my thought after choosing ϵ small enough that $|x - y| 0$ such that for all $\epsilon>0$, there exists $x\in \mathbb{C}$ and $y\in \mathbb{C}$ with $|x-z|=|y-z|=r$ such that $|f(x)-f(z)|>\epsilon$ and $|f(y)-f(z)|>\epsilon$. So, we can choose $\epsilon\epsilon$, so f is not Borel measurable. UPDATE: As Christian Fischer points out, our original proof is not correct. I had misread the value of r. The proof still holds, however, even though it does not follow from the definition of Borel measurability. If f is not Bore

Q: Stack Overflow is a little non-intuitive I've had a few hours to play with the new beta for the SO, and I found out that most of the questions I asked when I first joined the community were completely off topic. This puts me a little in a quandary, as I would like to figure out how to get to a good portion of the content that SO has to offer. Do you have any suggestions? A: Not really sure what you mean by "off topic". Are you talking about questions that were closed for some reason? If so, then I'm not sure how to suggest to someone without closed questions why they should ask a question that's already been answered. If you mean that you ask questions that are good, but don't get noticed because they're not on the new website, then there's a bunch of things you can do to help (although it really depends on the type of question, like if it's software or hardware). If you mean that you ask questions that are off-topic and don't get answered because the other website is new and the people are just trying to find questions to answer, then I do have a suggestion that might help: The other day when I was on the new beta site and saw that my email was still listed as being an owner on a question that I answered, I went in and started editing it so that the last person to edit it was me. That actually works, because even though people can't see your edits, they just see all of the new edits. Some of the time I get someone come by and comment (like me fixing stupid typos or adding tags). Unfortunately, Stack Overflow doesn't let me delete my account, so I can't remove any of my email addresses from the history. So why do I think it's better to have the most upvoted question at the top? Because I think it will provide a better selection of questions. If you put the most upvoted questions on the new website, you'd get questions that get multiple answers, which means that the people who answered a question would get an upvote and I'd get an upvote for my answer. That doesn't seem right. Now, Stack Overflow has a whole mess of rules for votes, but it sounds like what you really want is to promote your own questions. But that's not how it works
